

README.MD

TimeWise -

TimeWise is a simple web application that helps users organize their daily tasks in an easy and efficient way. The application allows users to add tasks, track them, and delete them when completed.

TimeWise -

TimeWise is a simple web application that helps users organize their daily tasks in an easy and efficient way. The application allows users to add tasks, track them, and delete them when completed.

Tools and Technologies Used

- HTML – for building the page structure
- CSS – for formatting and designing the interface
- JavaScript – for adding functionality and interacting with tasks
- Git & GitHub – for version control and collaboration

How to Use Git and GitHub

- Each member created a separate branch to work on.
- Commits were used with clear and organized messages.
- A pull request was created to merge the work into the master branch.
- Conflicts were resolved collaboratively among members.

How to Run the Project

1. Clone the project from GitHub:

Open the index.html file directly in the browser.
<https://github.com/raneem1-123/TIME-WISE.git>
Future Improvements

- Adding task priorities
- Task categorization (work, study, personal)
- Adding user login and data syncing to the cloud
